

Validate ideas quickly

with Design Sprints

Day 1

On the first day we stay in the problem space, challenging our understanding of the problem.

- Expert interviews
- User journey mapping

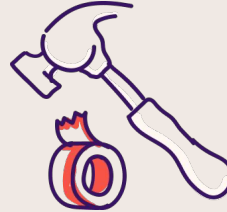

Day 2

On the second day we look for inspiration, ideate and sketch solutions together.

- Sketching
- Voting
- Storyboarding

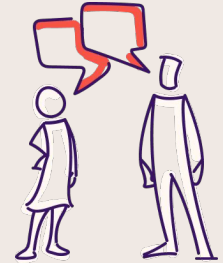

Day 3

On the third day we turn the most voted sketches into a prototype and prepare to meet the users.

- Usability test preparations
- Prototyping

Day 4

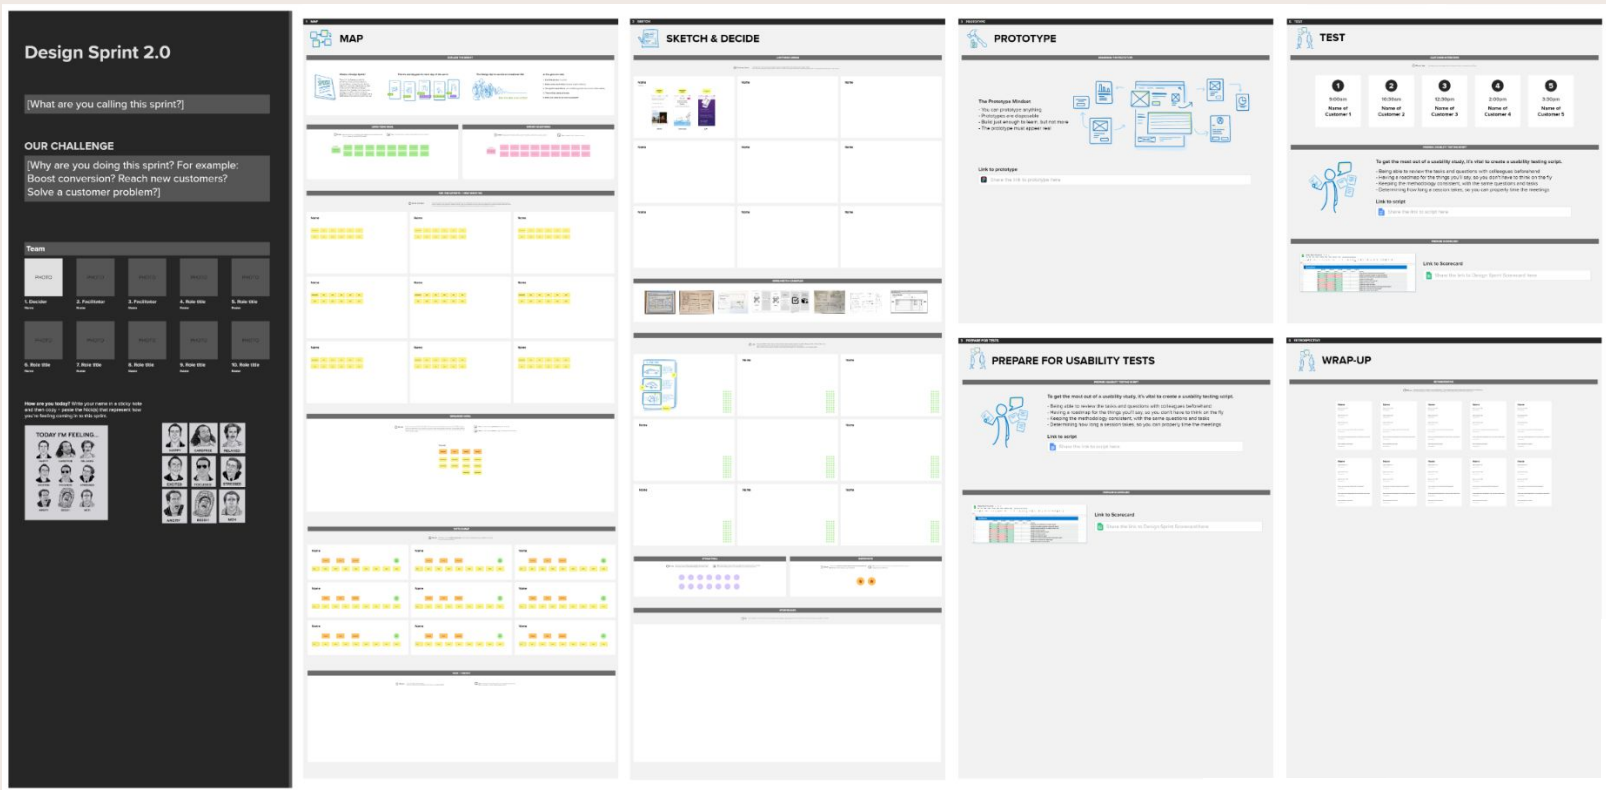

On the fourth and final day we test the prototype with users and round off the sprint together.

- Usability testing
- Retrospective

 How might we use AI to enhance
[task X / process x] for [target
group X] to reach
[desired (measurable) outcome
X]?

When to run a Design Sprint

- At the start of a **new project** to define your product or create a shared vision
- When you are adding **new functionality** to an existing product
- When you are **refreshing the interface** of an existing product
- When you are adding **machine learning or AI** to a product
- When you are **going mobile**
- When your team has hit a **roadblock** and needs to get unstuck
- When time is critical and you need to **speed up** the development or decision making process
- After uncovering **new insights** to leverage new findings, data or research

Design Sprint **team**

Product team (5-7 people)

Focus on the people who are responsible for building the product. Roles may include:

- **Product Manager/Owner**
- **Developer**
- **Business Analyst**
- **UX Designer**
- **Customer support**
- **Marketing**
- **Sales**

Facilitators (1-2 people)

Drives the Design Sprint and is in charge of the schedule. Will be managing time, conversations, and the overall sprint process.

Decider

Someone from the Product team who makes all the tough decisions when the team cannot agree.

Which **experts** to invite?

- Internal **domain experts** who often knows domain requirements and legislation

- **Customers and expert users** themselves, who often know their biggest needs and wishes

- **Sales** often knows customers desires

- **Customer support** often knows main user and customer pain points

- **Integration consultants** like support and sales, often know customer pain points and desires

Which **users** to invite?

- The users should fit into the intended **user group** mentioned in your challenge statement, as they are the ones who will use the solution after the sprint
- **Aim for 5 users** as it allows us to uncover up to **80% of usability issues** and identify important patterns
- Ideally, the users should represent **different customers**, making sure that we create a solution fit for a majority of customers
- **Aim for diversity** in terms of new customers, loyal customers, gender, age and so on, to get diverse feedback

Non-negotiable requirements

For our group service to facilitate, we have some non-negotiable requirements

- We need a committed team who set aside the time to participate
- We test on real users
- You have to commit to a measurable outcome
- We agree on a specific scope
- We need experts to show up on day 1

**Entrepreneurial
Responsible
Dedicated
Inclusive**

Make progress happen
